Questions and answers, tips and tricks (30 minutes)

Aims and Objectives

Laparoscopic procedures are continuously evolving in urology based on the increasing expertise of urologic surgeons. Since the number of centres with laparoscopic expertise is still limited in Europe, laparoscopic training programs have become very important. Hands-on training courses at the pelvi-trainer represent one of the main steps of basic laparoscopic training.

ESU/ESUT training research board has developed and validated a comprehensive program of education and assessment of the basic fundamentals of laparoscopic surgery namely E-BLUS. This basic laparoscopic training program is including a theoretical and practical exam, which can be taken at the end of the course and will be certified by EAU.

Finally, all remaining questions can be answered and discussed with all tutors including the demonstration of tips and tricks.

The E-BLUS program includes:

- Hands-on training (HOT) sessions of different levels
- A set of training-box exercises developed and validated by EUREP training group to train basic skills needed in urological laparoscopy. These basic skills exercises can be tested in an exam (E-BLUS exam)
- An online theoretical course through EAU web site.
- The HOT sessions are designed to cater to the specific needs of the participants and represent a unique opportunity to train with experienced national international experts in laparoscopy.

The set of exercises offered in this module for box-training addresses bimanual dexterity, depth perception, suturing, clipping and cutting skills. Clinical application is found in such procedures as partial nephrectomy, total nephrectomy, pyeloplasty and radical prostatectomy.

The set includes the following exercises:

- Peg transfer
- Cutting a circle
- Single knot tying
- Clip-and-cut
- Needle guidance

For each exercise a time limit is defined, as well as criteria for a successful completion of the exercise.

The trainees who want to take the practical exam have to accomplish first the theoretical EBLUS exam in internet (<http://www.uroweb.org/education/european-training-in-basic-laparoscopic-urological-skills-e-blus-exam/>)
