

Dear Colleagues,

As a urologist it is my great pleasure to express that developments in urology is far more ahead of the developments in other scientific disciplines. Especially, Endourology which currently takes place in the front line with its surgical techniques. Developments started with percutaneous surgeries, then continued with Retrograde Intra Renal Surgery, Laparoscopy and Robotic Surgery.

Due to all these technological developments we have created a large editorial board for this journal consisting of expert scientists from different branches. We are planning to make this journal as a source of reference to apply, with your contribution.

We would like to invite you to share with us your Robotics, Laparoscopy & Endosurgery experiences and your articles, video and presentations and we expect you to visit our web page: [www.robotictimes.org](http://www.robotictimes.org).

I believe this will be a great opportunity for all of us to share our knowledge, skills and experiences about surgical techniques and technological developments with other colleagues to contribute to scientific developments.

With my best regards,

**Dr. I. Yasar Ozgok**

Dr. I. Yasar Ozgok

Professor of Urology

Honorary Editor, Robotics, Laparoscopy & Endosurgery

Ankara, Turkey
